KIMTECH PURE* CL3 Wipers with patent-pending Clean-Dry Technology from Kimberly-Clark Professional deliver the best overall surface wipe-drying when compared to other leading 100% polyester cleanroom wipers, and achieved more than 25 percent better surface wipe drying than a leading competitive brand in independent testing. The wipers can be used for the most critical surface wiping tasks in ISO Class 3 or higher cleanroom environments. KIMTECH PURE* CL3 Wipers are 100 percent continuous filament double-knit polyester. They absorb liquids on contact while still delivering the low particle and extractable levels expected from polyester wipers. KIMTECH PURE* CL3 Wipers are solvent- and abrasion-resistant, have four laser-sealed edges to minimize particle generation, are cleanroom laundered in water filtered to 0.2 microns to minimize the potential for ion contamination, and are double-bagged to maintain cleanliness. The wipers are also compliant with AAMI Guidelines and gamma irradiated to a 10⁻⁶ Sterility Assurance Level (SAL). For more information, visit www.kcprofessional.com.
