KIMTECH PURE* CL4 Critical Task Wipers from Kimberly-Clark Professional are ideal for critical surface wiping in ISO Class 4 or higher cleanrooms. The wipers are made from a 100 percent meltblown polypropylene construction. They are thermally bonded, and thus contain no glues or binders. Their straight, clean, knife-cut edges help to minimize lint, and they are delivered double-bagged in anti-stat packaging. The wipers are resistant to acids, bases and solvents and can be Autoclaved and ETO-sterilized. In addition, they meet USDA requirements for food processing establishments. These wipers are available in 9"x9" and 12"x12" sizes. The KIMTECH PURE* CL4 Critical Task Wipers line also includes a pre-saturated alcohol wipe (right), for one-step application of alcohol (70 percent isopropyl alcohol/30 percent deionized water) to critical surfaces. These wipers are delivered in a re-sealable pouch and an anti-stat liner bag, and they measure 9"x11". For more information, visit www.kcprofessional.com.
