

A Pain-Free, Hassle-Free Guide to Understanding Waste Disposal

An Information Brochure Provided by Kimberly-Clark

Like many matters involving the government – income tax returns, for example – the regulations related to the disposal of used wipers are extremely detailed. They have to be. Think of all the businesses that use wipers, multiply that times all the different things they have to wipe up, then divide by how many wipers each business uses, times the square root of . . . you get the picture.

But that's the **LONG** version. Fortunately, you're only one business, with one set of wiping tasks and one usage pattern.

You already know (or can easily calculate) how much of what you wipe up and how many wipers you use to do it. So you just have to figure out what set of disposal rules applies to you. That's the **SHORT** version, and that's what this booklet is for.

This brochure contains Kimberly-Clark Corporation's interpretation of laws and regulations governing the disposal of hazardous waste as of July 2003. Laws and regulations change from time to time, as do the interpretations of these laws and regulations by regulators. Accordingly, Kimberly-Clark will not be responsible for the consequences of and party's reliance on the information contained herein.

wiper disposal

Here's a quick rundown of the important questions.

Is My Waste Hazardous?

You'll figure out whether your waste is considered hazardous by the government.

What Is My Generator Category?

You'll calculate the amount of hazardous waste you generate each month. Based on that number, you'll be able to determine what size of generator the EPA considers you.

What Are My Responsibilities for Hazardous Waste? How Can I Dispose of It?

We'll show you what responsibilities you have based on your Generator Category. Also, read about the Alliance For A Cleaner Environment Kimberly-Clark and Safety-Kleen® created to provide a simple, convenient way to manage hazardous waste disposal.

What About Oil and Grease?

We'll master the matter of oil and grease and the rules of disposal that pertain to oil- or grease-contaminated wipers.

Where Can I Get Help?

We list the agencies that will answer any questions you have, send inspectors to help you assess the various factors you need to consider, and help you figure out what is expected of you in terms of responsible compliance.

Is My Waste Hazardous?

Let's start with the basics: All businesses generate some sort of waste.

According to the Environmental Protection Agency (EPA) who has jurisdiction over waste disposal in the U.S., a waste is any solid, liquid or contained gaseous material that is discarded by being disposed of, burned or incinerated, or recycled, if the material has to be reclaimed prior to being reused. Waste can be the by-product of a manufacturing process or simply a product that you use in your business — such as cleaning fluid, paper clips, battery acid or wipers — that is being disposed of. Even materials that are recyclable or can be reused in some way (such as burning oil for fuel) may be considered waste. In other words, if you throw it away (in one way or another) it's waste.

But is it hazardous waste? Wastes are considered to be hazardous if they are known to be harmful to human health and the environment if not disposed of properly. Some, called acutely hazardous wastes, are highly dangerous even when managed properly — for example, wastes generated from some pesticides. The federal law governing the storage, handling and disposal of hazardous waste is the Resource Conservation and Recovery Act - **RCRA** (pronounced Recra). The regulations developed to implement this law are found in Volume 40 of the Code of Federal Regulations (commonly referred to as 40CFR).

You're thinking, "How should I know if my waste is hazardous?" Here's how. Answer the following questions yes or no. If you have even one yes answer, then your waste is hazardous. **(For help on characteristics 2-5, check the Material Safety Data Sheet — MSDS.)**

wiper
waste

- 1 Does it appear on any of the four lists published in the Code of Federal Regulations (40 CFR Part 261.30, 261.31, 261.32 and 261.33) To obtain these lists, call the RCRA Hotline at 1-800-424-9346 or go to the EPA website at <http://www.epa.gov/epaoswer/hotline>. These are called "**listed wastes**". A few of the commonly used listed hazardous solvents are Acetone, Xylene, Toluene and Methyl Ethyl Ketone (MEK).
- 2 Is it a liquid with a flashpoint below 140°F? (This is called **ignitable waste** — examples include certain paints, solvents and certain degreasers.) Is it a non-liquid waste that is spontaneously ignitable?
- 3 Does it corrode metals or have a very high (≥ 12.5) or low (≤ 2) pH? (**Corrosive waste** examples are certain rust removers, acid or alkaline cleaning fluids, and battery acid.)
- 4 Is it unstable or explosive, or does it produce toxic fumes, gases, and vapors when mixed with water or under other conditions such as heat or pressure? (These descriptions might fit some people you know. However, in relation to waste, these are called **reactive wastes**. Examples are certain cyanides or sulfide-bearing wastes.)
- 5 Is it harmful or fatal when ingested, or does it leach toxic chemicals into the soil or ground water when disposed of on land? (This is called **toxic waste**. Testing your waste using the Toxic Characteristic Leaching Procedure can determine whether it is officially toxic.)

If you're not sure whether some of the materials you use are hazardous, check your MSDS for more information or contact one of the resources listed in the "Where Can I Get Help?" section of the booklet.

Remember, even one "yes" answer above qualifies you as a generator of hazardous waste. But you need to know your generator category, too. Go on to the next page.

What Is My Generator Category?

You may be large, small, or something called “conditionally exempt small,” and depending on which you are, the regulations that apply to you will differ. So this determination is critical in knowing what is expected of you in order to meet the appropriate requirements. Fortunately, this, too, is a simple calculation. Sharpen your pencil — and get your calculator, computer, abacus, slide rule or accountant — you may have to multiply something!

STEP 1 The question is, how many pounds of hazardous waste do you generate in a month?

If you know this number right off the bat, write it in the blank to the right. _____

If you just wrote a number, skip down to STEP 4.

If instead you are saying to yourself, “My business generates liquid waste, you know, gallons, not pounds,” then go on to STEP 2.

STEP 2 To convert your liquid hazardous waste from gallons to pounds, you need to know the density of the liquid. A rough guide is that 30 gallons (about half of a 55-gallon drum!) of waste with a density similar to water weighs about 250 pounds. So do this:

A) In the space to the right, write the number of gallons of liquid hazardous waste you generate in a month _____

B) Now divide that number by 30 $\div 30 =$ _____

C) Now multiply that number by 250 $\times 250 =$ _____ lbs.

What Are My Responsibilities for Hazardous Waste?

Requirements for Generator Status	Conditionally Exempt Small Quantity Generator (CESQG)	Small Quantity Generator (SQG)	Large Quantity Generator (LQG)
Identify Hazardous Waste			
Proper Storage and Handling of Hazardous Waste			
Use a Hazardous Waste Manifest When Transporting Hazardous Waste			
Transport Waste on a Vehicle Licensed to Transport Hazardous Waste			
Dispose of Hazardous Waste at a Licensed Treatment, Storage and Disposal Facility (TSDF)			
Meet EPA Reporting Requirements			

Note that CESQGs may dispose of their hazardous waste in a municipal landfill and a hazardous waste manifest is not required. On the next page is a chart that provides estimates for the amount of Kimberly-Clark wiping products that can be used by CESQGs.

hazardous waste ?

Kimberly-Clark Wiping Product	Estimated Monthly Usage to Qualify as a CESQG (1)	Estimated Weekly Usage to Qualify as a CESQG (2)
WYPALL* X80 BRAG* BOX	2,750	685
WYPALL* X70 BRAG* BOX	4,360	1,090
WYPALL* L40 BRAG* BOX	4,925	1,230

- 1) Assumes that weight of the hazardous solvent remaining on the wipers when they are disposed equals the weight of the wipers and that the only hazardous waste generated by the facility is the wiping products soiled with the hazardous solvents.
- 2) Monthly figure divided by 4 weeks/month.

How Can I Dispose of My Hazardous Waste?

Now you know. If you use wipers that become soiled with hazardous waste, it's your responsibility to make sure their disposal is managed properly. Maybe you figure to avoid all that by using rental shop towels, letting hazardous waste issues become someone else's headache. Wrong. If you contract with such a company, you retain the full responsibility for ensuring that such materials are disposed of properly. Are you confident that your industrial launderer has the training and facilities to do that?

Disposable wipers offer an alternative to rental towels. But what about handling disposal — what about complying with the rules and regulations on the preceding pages?

The **quickest solution** may already be at your loading dock. Chances are you already have a company handling other hazardous waste for your business. You might check with them to see if they can handle your wiper waste too.

And then there is the beauty of the Kimberly-Clark and Safety-Kleen® Waste Management Solution — a program designed to help you handle your disposal needs.

Safety-Kleen® can take the problem of hazardous waste off your hands and off your mind. Your waste will be put to productive use – recycled as fuel. It will not end up in the public water system, or harm local rivers and streams. Your waste will be handled in accordance with all applicable environmental regulations.

Safety-Kleen® offers regularly scheduled pickup of your hazardous waste, and your fee covers expenses associated with the transportation, storage, recycling, disposal or converting of your waste.

You can contact Safety-Kleen® at 1-800-SK-CARES. Tell them where you are located and the Customer Service Representative for your state will walk you through the simple steps to set you up as a Safety-Kleen® customer.

Are the words “peace of mind” coming to you just now?

wiper disposal

What About Oil and Grease?

The states of California, Massachusetts, Minnesota and Vermont currently regulate used oil as a hazardous waste. However, oily wipers, as opposed to used oil, may currently be disposed of in municipal landfills in California and Massachusetts subject to specific requirements (see adjacent chart).

The other 46 states do not currently regulate used oil as a hazardous waste, and allow oil and grease contaminated wipers to be disposed of in municipal landfills. In most cases, additional specific disposal requirements apply (see adjacent chart on this page and next).

Oil Contaminated Wiper Disposal		
HAZARDOUS WASTE DETERMINATION AND NO-FREE-LIQUIDS REQUIREMENTS APPLY IN ALL CASES		
State	Landfill	Special Requirements & Comments
Alabama	Yes	Must use lined municipal landfills.
Alaska	Yes	Local ordinances should be checked.
Arizona	Yes	Local ordinances should be checked.
Arkansas	Yes	Class I Municipal landfill Only.
California	Yes	Oily wipers may be landfilled if determined to be non-hazardous according to RCRA and state regs.
Connecticut	Yes	State agency notification recommended for large quantities (no more than 1 cu. ft. wipers/load).
Colorado	Yes	
Delaware	Yes	
Florida	Yes	www.dep.state.fl.us/waste/categories/hazardous/pages/autocert.htm - Pilot compliance certification program targeted to auto-repair shops.
Georgia	Yes	Lined municipal landfills only.
Hawaii	Yes	
Idaho	Yes	
Illinois	Yes	State requires notifying landfill operator. Generator may certify that waste is not a special waste. Check http://www.epa.state.il.us/small-business/special-waste for guidance on non-special waste certification.
Indiana	Yes	
Iowa	Yes	US EPA rules apply. Iowa doesn't administer haz/solid waste regulations.
Kansas	Yes	Open bulk loads not regulated. Wipers shipped in drums require special authorization from state agency.
Kentucky	Yes	
Louisiana	Yes	State recommends notifying landfill operator.
Maine	Yes	State recommends notifying landfill operator.
Maryland	Yes	
Massachusetts	Yes	Specific state guidance exempting disposal of oily wipers.
Michigan	Yes	
Minnesota	No	Used oil banned from landfill. Recycle or burn for energy recovery. Used oil guidance doc: www.pca.state.mn.us/waste/pubs/4_30.pdf
Mississippi	Yes	
Missouri	Yes	

What About Oil and Grease?

In the 48 states that allow oil and grease contaminated wipers to be disposed of in municipal landfills, the generator must first: (1) confirm that the wipers do not contain other hazardous wastes (see pages 3-4), and (2) confirm that the wipers do not contain any free liquid (do not drip). If both of those conditions are met, the generator may dispose of the oil and/or grease contaminated wipers in accordance with the other special disposal requirements imposed by the particular state.

Because local ordinances and Federal and state regulations change from time to time, please check with your waste disposal facility or waste hauler prior to disposing of oil or grease contaminated wipers in a municipal landfill.

Oil Contaminated Wiper Disposal		
HAZARDOUS WASTE DETERMINATION AND NO-FREE-LIQUIDS REQUIREMENTS APPLY IN ALL CASES		
State	Landfill	Special Requirements & Comments
Montana	Yes	
Nebraska	Yes	Requirement to notify landfill.
Nevada	Yes	
New Hampshire	Yes	
New Jersey	Yes	
New Mexico	Yes	
New York	Yes	Generator can landfill non-hazardous & hazardous waste as a small quantity generator if it is no more than 220 lbs. per month.
North Carolina	Yes	Small amounts may be landfilled. Large amounts from significant spills are banned.
North Dakota	Yes	State recommends notifying landfill operator.
Ohio	Yes	
Oklahoma	Yes	
Oregon	Yes	State recommends notifying landfill. Less than 35 gallons of oil contamination allowed per truckload.
Pennsylvania	Yes	State recommends notifying landfill. Some landfills are not permitted to accept oil contaminated debris.
Rhode Island	Yes	
South Carolina	Yes	
South Dakota	Yes	
Tennessee	Yes	State recommends notifying landfill.
Texas	Yes	State recommends notifying landfill. Use only Class I industrial landfills for "heavily contaminated" debris.
Utah	Yes	State recommends notifying landfill.
Vermont	No	Oily wipers are hazardous only if the oil concentration in the wiper is greater than 5% by weight.
Virginia	Yes	
Washington	Yes	
West Virginia	Yes	
Wisconsin	Yes	State recommends looking into absorbent recycling.
Wyoming	Yes	

What About Oil and Grease?

If you send your soiled wipers to a municipal landfill, you may be wondering how much this method of disposal will cost you. Fees charged by municipal landfill companies are called “tipping fees” and the average cost in the U.S. in 1997 was \$33.70/ton.* At this cost, the cost per wiping product for disposal is very small, as shown below.

Wiping Product	Cost/Wiper For Disposal (1)
WYPALL* X80 BRAG* BOX	\$0.0016
WYPALL* X70 BRAG* BOX	\$0.0010
WYPALL* L40 BRAG* BOX	\$0.0008

1) Assumes that the weight of the material wiped (i.e. non-hazardous waste) that remains in the wiping product is equal to the weight of the wiping product, and that the cost of disposal is \$33.70/ton.

* “Tipping Through Time,” Waste Age, 11/02

oil & grease

How Can I Get Help?

You've read the long and the short of disposal issues.

If you would like additional information, or if you would like to contact any of the resources we've referenced in this booklet, here are names, addresses, phone numbers, website and/or any other information we could think of to include. Laws and regulations change from time to time as do the interpretations for these laws and regulations by regulators. As a result, we encourage you to become as informed as possible about the disposal regulations pertaining specifically to the materials you use and to the community in which you operate.
