

ELECTRONIC TOUCHLESS HARD ROLL TOWEL DISPENSER

The dispenser cover is made of a 22 gauge brushed stainless steel mounted to a steel grey backed enamel frame. The electronic module automatically dispenses a single sheet of paper when the users' hand is placed beneath the dispenser. The module operates on four D size batteries or an AC power adapter. The dispenser features include adjustable sheet length, time delay and sensitivity with the hand sensor located on the bottom of the unit allowing for natural hand placement. Other features include a stub roll system as well as a sleep mode switch that conserves battery life when the bathroom lights are off. Fits most 12" to 15" wide recessed folded towel dispenser cabinets with 4" or greater depth. 1 per case.

NOTE: Unless otherwise noted, suggested mounting height is the distance from the floor to the bottom of the dispenser.
