

91934

91935

SURETOUCH® Dispenser

Made of stainless steel and chrome-plated plastic (91934) or stainless steel and brass plated plastic (91935). Each soap cartridge refill includes a tube that runs through the nozzle so that soap never contacts the dispenser. Designed so that the soap never comes in contact with the metal dispensing parts, eliminating build-up and corrosion. It also eliminates pump maintenance hassles. Refill cartridges slide easily into place and lock into position. Dispenser will not require soaking or flushing out. 1 per case.

NOTE: Unless otherwise noted, suggested mounting height is the distance from the floor to the bottom of the dispenser.
